

**LINKING EMPLOYEE RECOGNITION AND EXTRA ROLE
BEHAVIOUR: A STUDY ACROSS HOSPITALITY INDUSTRY**

Project Report

Submitted by

Ms. SAKTHIPRIYA R

(REG NO: 2415782022030)

In partial fulfilment of the requirement for the award of the Degree
MASTER OF ARTS IN HUMAN RESOURCE MANAGEMENT

Under the guidance of

MR. M. HEMAKUMAR, MA HRM, M.Phil., *Ph.D*

ASSISTANT PROFESSOR

P. G. DEPARTMENT OF HUMAN RESOURCE MANAGEMENT

MADRAS SCHOOL OF SOCIAL WORK

(AUTONOMOUS)

NO. 32, CASA MAJOR ROAD, EGMORE

CHENNAI – 600 008

SEPTEMBER 2025

BONAFIDE CERTIFICATE

This is to certify that the project titled “LINKING EMPLOYEE RECOGNITION AND EXTRA ROLE BEHAVIOUR: A STUDY ACROSS HOSPITALITY INDUSTRY” is a bonafide project work done by Ms. SAKTHIPRIYA R (Register No- 2415782022030), a second year student of M.A.HRM, Madras School of Social Work(Autonomous), Egmore, Chennai in partial fulfilment of the requirement for the Award of the Degree of Master of Arts in Human Resource Management and that the project has not been used previously for the award of any Degree, Diploma, Scholarship, Fellowship or any other project title.

Signature of the Guide

DECLARATION

I, SAKTHIPRIYA R, final year student of M.A. HRM, hereby declare that the thesis entitled “LINKING EMPLOYEE RECOGNITION AND EXTRA ROLE BEHAVIOUR: A STUDY ACROSS HOSPITALITY INDUSTRY” is the original work done by me under the guidance and supervision of Prof. M. Hemakumar in partial fulfilment of the requirements for the award of the degree of Master of Arts in Human Resource Management, Madras School of Social work. I further declare that the research work has not been submitted at any other University or Institution, for the award of any degree or diploma or fellowship.

Signature of the Guide

Signature of the Student

PLACE: CHENNAI

DATE:

ACKNOWLEDGEMENT

First and foremost, I thank God for his immense blessings and for making this study happen as planned.

I would like to begin by thanking the Principal, **Dr. Raja Samuel** for being a pillar of support throughout my duration as a student at Madras School of Social Work.

I would like to extend my heartfelt gratitude to **Prof. M. Hemakumar**, Head of Department, PG Department of HRM for his constant guidance and support.

I would like to thank my guide, **Prof. M. Hemakumar**, Head of Department, PG. Department of HRM for helping me constantly with all his inputs/feedback and finish the project on time.

Last but not the least, I would like to record my profound gratitude to all the respondents who co-operated and answered the questionnaire.

CHAPTER - I

INTRODUCTION

1.1 INTRODUCTION

The way people are treated at work is becoming a more important factor in today's ever-changing organizational landscape than strategic planning or technological innovation. Employees are no longer viewed as a small part of the organization; rather, they are recognized as the heart of its potential, and their ideas, drive, and willingness to go above and beyond their formal job descriptions can make the difference between a company that is stagnant and one that is thriving. This voluntary effort, which academics and practitioners refer to as "extra-role behavior," has become a focal point for managers, HR professionals, and organizational leaders across sectors. Yet, one critical question remains: what truly inspires employees to engage in these behaviours that are not required, yet are immensely valuable?

Employee appreciation stands out among the many variables influencing extra-role behavior as being both empirically promising and intuitively appealing. On the surface, it may appear easy to recognize an employee's efforts when they are acknowledged, valued, and celebrated. Beneath this simplicity, however, is a potent lever for organizational citizenship, culture development, and motivation. The urge to be noticed, appreciated, and respected is one of the basic human wants that recognition fulfills. Additionally, when executed properly, it can inspire a feeling of ownership, belonging, and purpose that motivates actions beyond the call of duty.

Formal employee recognition programs have been popular in businesses all around the world as a means of increasing engagement, boosting retention, and encouraging desired workplace behaviors. From formalized award systems and peer nomination platforms to unplanned appreciation campaigns and milestone celebrations, these programs come in a wide range of formats. But whatever shape they take, they all aim to give workers a sense that their labor counts. Additionally, people tend to be more creative, collaborative, and caring when they believe their work counts. This is where extra-role behavior is seen.

Extra-role behaviours, as defined by organizational behaviour scholars, include actions such as helping colleagues, volunteering for additional tasks, speaking up with constructive suggestions, and showing initiative. The effectiveness of the organization depends on these behaviors, which are neither formally rewarded nor enforced. Teams that help one another, innovate together, and proactively solve problems are more agile, resilient, and capable of long-term success. Hence, understanding how to cultivate these behaviours is more than an academic curiosity it's a business imperative.

This research aims to investigate how employee recognition programs affect extra-role behaviors in a variety of organizational circumstances by conducting a cross-sector study in the hospitality industry. Specifically, it aims to understand whether recognition strategies have different effects in the private, public, and nonprofit sectors, and why. Is a formal “Employee of the Month” plaque equally effective in a one department as it is in another? And crucially, what kind of recognition truly resonates with employees and encourages them to exceed expectations?

These are not merely theoretical questions. Companies can no longer afford to ignore the human aspects of motivation in a time of high employee turnover, talent shortages, and growing demands on employee well-being. Recognition, when done authentically and thoughtfully, offers a cost-effective, emotionally intelligent way to nurture positive work cultures and sustainable performance. However, it needs to be interpreted in a cultural, structural, and psychological context in order to be genuinely successful.

The human aspect of organizational life is also heavily emphasized in this work. All too frequently, conversations about workplace behavior are reduced to models and analytics, ignoring the real-life struggles faced by actual individuals. Workers are people with goals, anxieties, and emotional landscapes, not just "resources" to be maximized. Therefore, acknowledgment is more than simply a management tool; it's a kind of interpersonal communication that upholds an individual's worth and importance within the company. Cynicism and disengagement can result when acknowledgment is lacking or seems fake. However, when it is genuine, timely, and present, it can inspire remarkable efforts that have an impact well beyond the individual.

This study uses both quantitative and qualitative approaches to capture these processes, gaining knowledge from a wide range of managers and workers in various industries. By doing this, it seeks to shed light on the narratives, attitudes, and organizational environments that influence this relationship in addition to quantifying the effect of recognition on extra-role behavior. In order to promote healthier, more engaged workforces, the objective is to go past generalizations and toward actionable, evidence-based suggestions that managers can put into practice.

In the end, this study is based on the straightforward yet potent premise that when individuals feel recognized, valued, and appreciated, they will offer more of themselves. Additionally, encouraging extra-role behavior through meaningful acknowledgment may be one of the most

underutilized tactics available in a world when firms are looking for every advantage conceivable, from efficiency to innovation to resilience.

Understanding and utilizing the power of recognition is more important than ever as the modern workplace continues to change due to demographic transitions, hybrid work, and a growing focus on employee well-being. The goal of this research is to advance that understanding by providing profoundly human insights in addition to rigorous academic ones. It seeks to illuminate the subtle, frequently imperceptible dynamics that motivate individuals to go above and beyond the call of duty and, in doing so, elevate the entire organization by investigating the ways in which recognition affects extra-role behavior across many industries.

1.2 NEED AND SCOPE OF STUDY

In order to provide outstanding guest experiences, the hospitality sector is particularly people-centric and mostly depends on the attitudes, actions, and voluntary efforts of frontline staff. Formal job classifications frequently fall short of capturing the entire spectrum of behaviors that support customer happiness, team cohesiveness, and organizational success in such a service-driven industry. Extra-role behaviours—such as going out of the way to assist a guest, supporting colleagues during peak hours, or offering creative suggestions—are not just beneficial; they are essential. Yet, what drives these voluntary actions remains an underexplored area, particularly in the context of employee recognition.

This study is needed to bridge the gap between recognition practices and their influence on extra-role behaviour within hospitality. Even while recognition programs are used by many organizations, few are aware of the behavioral and psychological effects they have, particularly in high-pressure service settings.

The scope of this research is confined to the hospitality sector, examining hotels, resorts, and related service establishments to identify how recognition both formal and informal affects employees' willingness to go beyond prescribed duties. By focusing on this industry, the study aims to offer actionable insights for hospitality leaders seeking to improve service quality, employee engagement, and organizational culture through strategic recognition initiatives.

1.3 STATEMENT OF THE RESEARCH PROBLEM

Customer happiness and corporate success are significantly impacted by employee behavior in the hotel sector, which depends on providing high-quality services. Employees that go above and above the call of duty by assisting coworkers, taking initiative, and providing individualized service provide substantial value to their organizations. However, maintaining such discretionary efforts might be difficult in a field characterized by lengthy workdays, high levels of stress, and high turnover rates. Although recognition programs are increasingly seen as an effective means of encouraging and rewarding positive behavior, little is known about how they actually affect extra-role behavior in the hospitality industry. Although prior studies have looked at employee performance and recognition generally, little is known about how structured recognition programs affect discretionary efforts in various hospitality industry segments. This gap raises a critical problem: to what extent do employee recognition programs foster extra-role behaviours, and how consistent are these effects across diverse hospitality settings?

1.4 SIGNIFICANCE/ IMPORTANCE OF THE STUDY

Customer happiness and brand reputation are directly impacted by employee performance in the hotel sector, which makes this study extremely valuable. The study provides insights on how employee recognition can be strategically used to improve motivation, teamwork, and service quality by examining the relationship between extra-role behavior and recognition. Additionally, it fills a research gap in the industry, giving management a greater understanding of what motivates workers to go above and beyond the call of duty. In a competitive service industry, the results can help improve guest experiences and organizational success by guiding more efficient HR procedures and cultivating a culture of gratitude.

1.5 INDUSTRY PROFILE

India's dynamic and constantly changing hospitality sector is essential to the development of the nation's economy and reputation abroad. The sector showcases India's warmth and diversity, from opulent hotels in vibrant cities to homestays nestled in picturesque villages. People from a variety of demographics can now more easily access hospitality thanks to rising disposable incomes, shifting lifestyles, and a robust domestic travel industry. At the same time,

foreign tourists are still drawn to India by its natural beauty and cultural diversity. The industry has benefited from increased connectivity via highways and airports as well as government initiatives like Incredible India. Growth was first delayed by the pandemic, but it also gave rise to new trends including wellness travel, staycations, and digital-first services. Today, the industry is focusing on sustainability, technology, and personalized experiences, ensuring that hospitality in India is not just about service, but about creating memorable journeys.

1.6 CHAPTERISATION

Chapter 1 – Introduction

This chapter contains introduction, Need and significance of the study, statement of purpose, Objectives and Statement of research problem.

Chapter 2 - Review of literature

The second chapter gives a theoretical and research review of the research and contains an elaborative literature survey of the subject under study

Chapter 3 - Research methodology

The third chapter deals with significance of the study, objectives, hypothesis, research design, sampling methods, methods of data collection, scoring and interpretation and limitations of the study.

Chapter 4 - Data analysis and Interpretation

The fourth chapter contains a data analysis of the research findings and their corresponding interpretations.

Chapter 5 - Findings, suggestion and conclusion

The fifth chapter summarizes the findings, suggestions and conclusion which indicate the scope for further research in the area of study.

CHAPTER - II

LITERATURE REVIEW

REVIEW OF LITERATURE

The study looks into the main factors that affect how trust is perceived and how they contribute to extra-role behavior in public sector non-profit organizations. The study, which uses data from 329 replies from five local government entities in Australia, finds that employee perception is significantly influenced by psychological support, rewards, aligned management values, and management trust. The results are consistent with earlier research that highlighted trust as the cornerstone of organizational citizenship behaviors, especially in non-profit, value-driven settings. However, the sample's voluntary and geographic characteristics restrict its wider application. This study encourages more cross-cultural and sectoral research and offers practical benefit by guiding management techniques for improving employee engagement and performance in public non-profits with limited resources. (Attiogbe et al., 2024).

This study adds to the expanding corpus of research on extra-role behavior and trust in public sector non-profit organizations. It emphasizes important antecedents that are fundamental to creating employee views that promote discretionary behavior, including psychological support, corporate ideals, trust in management, and rewards. The study emphasizes the importance of employee autonomy and decision-making participation, which is consistent with current views on corporate citizenship behavior. It's interesting to note that, although autonomy and involvement were powerful indicators of extra-role behavior, information sharing and intrinsic motivation had a relatively less impact, providing a more nuanced understanding of the dynamics of employee engagement. Although the study's voluntary sample and geographic boundaries imply limitations in generalizability, its focus on public sector non-profits in Australia offers a useful perspective. Nonetheless, the findings underscore the need for trust-based management practices in similar organizational settings, contributing practical value to public administration and human resource literature, and opening avenues for comparative research in private non-profit contexts. (Wright, 2010)

By putting forth two cross-level models—task facilitation and climate building—this study contributes to our understanding of extra-role behaviors in work groups, particularly helping and speaking out. The research, which draws from three empirical studies, demonstrates that group-level assistance improves individual task performance and favorably influences affective climate. However, the impact of voice behavior varies depending on the clarity of the aim; it is viewed favorably when the goals are unclear and unfavorably when they are, particularly when

self-serving motivations are involved. These results add to theoretical frameworks and useful organizational tactics by highlighting the contextual character of extra-role behaviors and their substantial impact on group success. (Neale, 2008)

This study investigates how extra-role behavior is affected by organizational changes at a few private secondary schools in Nigeria's Rivers State. The study assesses the relationship between change initiatives—specifically, effective communication and employee involvement—and discretionary work behavior using a cross-sectional survey approach and a sample of 140 teachers and administrative staff. Results show that employees' extra-role behavior, like initiative and cooperation, is encouraged when organizational transformation is led by transparent communication and participatory decision-making. The study emphasizes the value of participatory tactics in boosting performance and reducing resistance to change, which is consistent with the body of research on change management and employee engagement. (Okeke, 2023)

This study uses a controlled laboratory experiment to investigate the aftereffects of social stress on many dimensions of work performance. Negative feedback and social isolation were used to create stress in 70 individuals, who were then placed in either a stress-inducing or no-stress situation. The study evaluated effects on subjective operator state, extra-role behavior, divergent creativity, and attention. The results showed that social stress increased negative affect and decreased self-esteem, while also having a detrimental impact on attention accuracy and some spontaneous extra-role activities. In order to gain a better knowledge of workplace stress dynamics, the study emphasizes the necessity of looking at delayed reactions to stress rather than just the immediate effects on performance. (Sauer et al., 2022)

This study examines the role of transformational leadership (TL) on extra-role behavior and job performance during the COVID-19 pandemic, using a mixed-methods design. Drawing on 259 survey responses and 219 open-ended answers, the research explores the mediating effects of thriving at work, positive and negative affect, and the moderating role of coworker support. Findings reveal that TL enhances extra-role behavior and job performance primarily through emotional states and workplace thriving. Interestingly, coworker support moderated only the link between TL and negative affect. The study also highlights contrasting employee experiences based on work setting. By expanding the broaden-and-build and social exchange theories, this research offers novel insights into leadership, employee well-being, and discretionary behavior during crisis periods, especially in remote work contexts.

By investigating the relationship between job crafting and workplace flourishing (WF) and extra-role behavior (ERB) among non-family workers (NFEs), this study fills a significant research gap in family business studies. It investigates the relationship between ERB and three job crafting dimensions—resource seeking, challenge seeking, and job demand reduction—using WF as a mediating factor. It is based on the Conservation of Resources theory. According to research using matched employee-supervisor data from 256 workers in private family businesses, job crafting improves WF, but challenge seeking is the only factor that directly affects ERB. Nonetheless, the association between ERB and all aspects of job designing is considerably mediated by WF. This highlights the importance of perceived resource gain in motivating NFEs to go beyond formal job roles. The study contributes to the limited literature on NFEs in family businesses and underscores the need for supportive environments that foster flourishing to drive discretionary effort. (Razzak, 2023)

This study examines how work engagement, social support, and resilience affect extra-role activity in Indonesian Generation Z employees. Responses from 288 Gen Z participants, ages 23 to 25, were analyzed using a quantitative survey methodology and PLS-SEM. The results showed that work engagement and resilience have a favorable impact on extra-role behavior. Social support had a surprising negative and negligible impact on extra-role behavior, but it had a good impact on work engagement. These results demonstrate how important engagement and resilience are in encouraging Gen Z workers in their early careers to put out discretionary effort. The study adds to the growing body of research on workplace generational behavior and urges more investigation into the complex ways in which social support influences extra-role contributions in this group. (Lestari & Hendrawan, 2022)

With an emphasis on the moderating influence of job self-efficacy, this study investigates the connection between optimistic thinking and extra-role actions. conducted using a census approach among 166 workers of the Shiraz Province's General Directorate of Roads. The results showed a strong positive correlation between extra-role behaviors and optimistic thinking, and they also showed that job self-efficacy reinforces this association. These findings imply that developing a positive outlook and a strong sense of confidence related to one's work can improve discretionary efforts outside of official employment tasks. The study adds to the expanding corpus of research that relates workplace civic behavior to psychological resources. (Shakoor, 2024)

This study investigates how team-based recognition initiatives affect customer happiness, staff engagement, effort, and financial performance in business environments. The study, which lasted 12 weeks and was spread among six fast-food franchise sites, evaluated the impact of non-monetary team recognition (such as token gifts and thank-you notes) using a pre-post design. Research shows that staff involvement and effort are greatly increased by this kind of reward, which also has a good impact on customer satisfaction and financial results. By moving the emphasis from individual-level to team-based recognition, this study expands on previous research and adds to the small body of empirical literature on recognition programs in real-world settings. It has useful ramifications for businesses where it is challenging to quantify individual performance and where employee motivation is generally low. (Presslee et al., 2022)

This study investigates the effects of incentive and recognition schemes on worker retention, satisfaction, and motivation. Through industry-wide surveys, interviews, and focus groups, it was discovered that successful programs increase engagement, which in turn increases loyalty and productivity. Fairness, adaptability, and unambiguous communication are essential success components. According to the study, workers' dedication and performance increase when they truly feel valued. These results provide firms looking to improve engagement through meaningful recognition initiatives with useful advice. (Satish et al., 2023)

The study investigates how employee performance, satisfaction, and retention are affected by reward schemes, both monetary and non-monetary. The study uses an empirical design, 200 respondents chosen by simple random selection, and structured questionnaires to collect both qualitative and quantitative data. It especially looks at how promotion rules, recognition initiatives, and financial incentives affect worker results. The results are consistent with previous research, confirming that well-designed incentive programs greatly improve worker performance and satisfaction. The study highlights how important rewards are to accomplishing business objectives and successfully retaining people. (Lavanya, Varalakshmi, & Sruthi, 2024)

This study investigates how intrinsic motivation—more especially, gratitude and acknowledgment—can improve worker commitment, performance, productivity, and job satisfaction. Despite their fundamental psychological significance, it points to a study vacuum in our understanding of the effects of appreciation and recognition on employees. To quantify the impact of appreciation and recognition on workers, particularly those in talent management

positions, the study will use a survey approach and structural equation modeling (SEM) through AMOS, both of which have been previously verified. (Abdullah et al., 2016)

Talent management and employee recognition are increasingly viewed as strategic tools for enhancing employee performance. Loli and Rizk (2020) explored these variables within research institutions in Qatar and found a significant positive correlation between them and employee outcomes. Their study involving 180 full-time employees revealed that recognition fulfills employees' higher-order needs like esteem and social status, which directly contributes to job performance. The research emphasizes the importance of structured recognition practices to boost morale and align individual efforts with organizational goals. This study fills a regional gap by addressing recognition and talent management within Middle Eastern institutions. (Loli & Rizk, 2020).

It is becoming increasingly difficult to retain Generation Z workers, particularly in more established sectors like mining. According to a recent study on the Platinum Group Metals (PGM) industry in South Africa, professional development opportunities have no discernible effect on Gen Z retention, while employee recognition and flexible work schedules do (Maboya & Chauke, 2023). This suggests a change in the values of the generation, where gratitude and work-life balance are valued more highly. In order to meet Gen Z's unique workplace expectations, the study emphasizes the necessity for firms to reevaluate their talent strategy, placing more emphasis on flexibility and individualized recognition than traditional growth incentives. (Kgarimetsa & Naidoo, 2024)

Programs for employee recognition have become popular ways to improve strategic alignment and employee engagement. One case study demonstrates how a company put in place a recognition system that encouraged learning and linked worker actions to more general business objectives (Boyd, 2017). In addition to raising engagement levels, the program promoted alignment around four crucial behaviors, which increased income and clarified strategy. The study emphasizes the wider importance of acknowledgment in fostering a collaborative and learning culture. It illustrates how well-designed recognition programs can be effective instruments for promoting both individual achievement and organizational success. (Boyd, 2017).

The study investigated the effects of praise and acknowledgment on both internal and external motivation at work. The study, which drew on Herzberg's Two-Factor Theory and Self-Determination Theory, discovered that while appreciation increases intrinsic motivation

through emotional connection and autonomy, acknowledgment increases extrinsic motivation by validating efforts. When combined, they raise organizational civic behavior, lower turnover, and increase engagement. The study highlights the need for more empirical research to adapt these methods to hybrid work situations and stresses the importance of utilizing technology to modify strategies for lasting impact. (Imran et al., 2024)

Performance is improved by employee acknowledgment, albeit the effects can differ depending on the style of recognition and the dynamics of the workplace. A recent study investigated how performance is impacted by witnessing others receive attention in addition to direct recognition impacts. It emphasized the emotional reactions that mediate this relationship, including adoration, jealousy, and both benevolent and malevolent envy. The findings highlighted the complexity of emotional responses to acknowledgment by demonstrating a partial relationship between envy and performance. These results imply that in order to create more potent recognition techniques, additional investigation into emotional undercurrents is required. (Hurd, n.d.)

Innovation in the public sector is essential during times of global crisis. A large-scale study conducted in Australia using the person-environment fit theory discovered that HRM practices, including employee recognition and inclusion, significantly increase public servants' entrepreneurial attitudes. By improving fit between individuals and their jobs and organizations, these approaches promote an innovative culture. On the other hand, conventional instruments like training and performance reviews have very little impact. In order to foster entrepreneurial attitudes in the public workforce, the findings advise public managers to give inclusive and participatory HR policies top priority. (Vivona & Lewis, 2023)

This study examined the relationship between employees' active participation at work and acknowledgment from supervisors and colleagues. According to a survey of 130 workers, coworker recognition increases these impacts, while management recognition directly and indirectly increases involvement by fostering a sense of meaningfulness. The results highlight the combined influence of peer and management appreciation and demonstrate that meaningfulness is a crucial factor in the relationship between engagement and recognition. (Montani et al., 2017)

This study investigated the effects of leadership rewards and recognition on organizational citizenship behaviors (OCBs) among Washington State healthcare workers. While the majority of workers exhibited OCBs, executives frequently neglected to recognize them, particularly

during performance reviews, according to a survey of 115 participants. According to the research, rewarding and recognizing OCBs can improve performance, teamwork, contentment, and productivity—all of which will ultimately aid in keeping important employees. (Conzelmann, n.d.)

This study investigated the effects of rewards, recognition, perceived organizational support, and leader-member interchange on service-oriented citizenship behaviors using data from 4,220 Canadian bank workers. The results demonstrated that the association between recognition and positive service behaviors like loyalty and engagement is mediated by support and strong leader relationships. The findings demonstrate that in order for front-line employees to provide outstanding customer service, which has a direct impact on customer satisfaction and business performance, supportive workplaces and efficient recognition mechanisms are essential. (Wilches-Alzate, 2009)

CHAPTER - III
RESEARCH METHODOLOGY

RESEARCH METHODOLOGY

3.1 Objectives of the Study

- To analyze the relationship between employee recognition programs and extra-role behaviour in the hospitality sector.
- To evaluate whether recognition programs have varying impacts across different functions of the hospitality industry.
- To provide practical recommendations for hospitality leaders and HR managers on designing recognition initiatives that strengthen organizational citizenship behaviours.
- To analyze whether demographic variables such as gender and its relationship between employee recognition and extra-role behavior.

3.2 Hypothesis of the Study

Objective 1: To examine the relationship between employee recognition programs and extra-role behaviour in the hospitality sector.

- **H₀₁:** There is no significant relationship between employee recognition programs and extra-role behaviour in the hospitality sector.
- **H₁₁:** There is a significant positive relationship between employee recognition programs and extra-role behaviour in the hospitality sector.

Objective 2: To evaluate whether recognition programs exert varying impacts across different functional areas of the hospitality industry.

- **H₀₂:** Recognition programs do not have significantly different impacts across various functional areas of the hospitality industry (housekeeping, kitchen, front desk, etc.).
- **H₁₂:** Recognition programs have significantly different impacts across various functional areas of the hospitality industry.

Objective 3: To analyze the significance of demographic variables, such as gender, in the relationship between employee recognition and extra-role behaviour.

- **H₀₃:** Gender does not significantly impact the relationship between employee recognition and extra-role behaviour.
- **H₁₃:** Gender significantly impacts the relationship between employee recognition and extra-role behaviour.

Objective 4: To analyze the significance of demographic variables, such as gender, in the relationship with extra role behaviour.

- **H₀₄:** Gender does not significantly differ the relationship with extra role behaviour.
- **H₁₄:** Gender significantly differ the relationship with extra role behaviour.

3.3 Definition of Variables

- **Independent Variable:** Employee recognition programs

Employee Recognition Program is a formalized way for companies to consistently appreciate and celebrate their employees' efforts.

- **Dependent Variable:** Extra-role behaviour

Extra role behavior is defined as discretionary behavior that goes beyond expected roles and that intends to benefit the organization.

3.4 Research Design

- Quantitative approach
- Descriptive & Cross-sectional design
- Structured surveys to measure relationship between recognition programs and OCB

3.5 Sampling Methods

- **Population:** Employees in the hospitality sector
- **Sampling Technique:** Convenience sampling
- **Sample Size:** 100–150 respondents

3.6 Methods of Data Collection

- **Primary Data:** Structured questionnaire (Google Forms)
- **Secondary Data:** HR reports, organizational policies, industry publications, academic studies

3.7 Tools for Data Collection

- Questionnaire with three sections:
 - Section A: Demographics
 - Section B: (Lee & Allen OCB Scale, 2002)

- Section C: (Cannon Employee Recognition Scale, 2015)
- 5-point Likert Scale (Strongly Disagree – Strongly Agree)

3.8 Pilot Study

- Pilot test conducted with 20 respondents to refine questionnaire and check clarity

3.9 Reliability and Validity

- Reliability tested through pilot survey responses.

Dependant Variable

Cronbach's Alpha	N of Items
.979	15

Independent Variable

Cronbach's Alpha	N of Items
.979	8

- The Cronbach's Alpha value of 0.960 indicates excellent internal consistency of the scale used in the study. This suggests that the items are highly reliable and consistently measure the underlying construct, ensuring that the survey or questionnaire produces stable and dependable results.
- Validity ensured by using established scales (Lee & Allen OCB, Cannon recognition scale)

3.10 Limitations of the Study

- Responses depend on employees' perceptions (may include bias)
- Sample size restricted to 100–150 employees, may not represent entire industry.

CHAPTER - IV
DATA ANALYSIS & INTERPRETATION

PERCENTAGE ANALYSIS

Table 4.1 – Age Wise Classification

	Frequency	Percent
18 - 25	76	58.9
26 - 40	41	31.8
40 and above	12	9.3
Total	129	100.0

Chart 4.1 - Age Wise Classification

The chart indicates that more than half of the participants are young employees, with the majority of respondents (58.9%) falling into the 18–25 age range. Less than one-tenth (9.3%) of the respondents are 40 years of age or older, while around one-third (31.8%) are between the ages of 26 and 40. The workforce is primarily young, as evidenced by this distribution, with relatively few mid-career and senior personnel represented. This pattern is indicative of the hospitality industry's dependence on younger workers, who are more likely to enter, adjust to, and remain in positions requiring adaptability, vigor, and interaction with customers.

Table 4.2 – Gender Wise Classification

	Frequency	Percent
Male	104	80.6
Female	25	19.4
Total	129	100.0

Chart 4.2 – Gender Wise Classification

According to the gender breakdown, men make up the great majority of responders (80.6%), with women making up just 19.4%. With men making up over 4/5 of the sample and women making up less than 1/5, this suggests a notable gender imbalance. This skew indicates that the workforce in the hospitality business is primarily male, which could be caused by things like job roles, company culture, or opportunities that draw or keep more males than women.

Table 4.3 - Work Experience (years)

	Frequency	Percent
0 - 10	88	68.2
11 - 20	33	25.6
21 - 30	8	6.2
Total	129	100.0

Chart 4.3 - Work Experience (years)

The table shows that the majority of respondents (68.2%) fall in the 0–10 range, accounting for more than 2/3rd of the sample. About 1/4th of respondents (25.6%) are in the 11–20 range, while only a small fraction (6.2%) fall in the 21–30 category. This indicates that most participants have lower values in this variable, with progressively fewer individuals represented in the higher ranges, suggesting a declining trend as the range increases.

Table 4.4 - Department

	Frequency	Percent
Kitchen	36	27.9
Housekeeping	31	24.0
Front Desk	9	7.0
Security	7	5.4
HR	1	.8
Sales/Commercial	14	10.9
Finance	9	7.0
Engineering	13	10.1
Others	9	7.0
Total	129	100.0

Chart 4.4 - Department

The table shows that more than 1/4th of respondents (27.9%) work in the kitchen, forming the largest group. Close to 1/4th (24.0%) belong to housekeeping, making it the second major category. Sales/Commercial (10.9%) and Engineering (10.1%) together account for about 1/5th of the respondents. Smaller proportions are found in Finance (7.0%), Front Desk (7.0%), and Others (7.0%). Security (5.4%) and HR (0.8%) form the least represented groups. This distribution highlights a majority concentration in core operational areas like kitchen and housekeeping, with fewer employees in administrative and specialized roles.

Table 4.5 - Type of Industry

	Frequency	Percent
Indian	17	13.2
Foreign	112	86.8
Total	129	100.0

Chart 4.5 - Type of Industry

The table indicates that a vast majority of respondents (86.8%) are foreign, while only 13.2% are Indian. This means more than 4/5th of the participants belong to the foreign category, whereas just about 1/10th are Indian. The clear dominance of foreign respondents suggests that the sample is heavily inclined toward international representation, with Indians forming only a small minority.

EXTRA ROLE BEHAVIOUR

Table 4.6 - I help others who have been absent.

	Frequency	Percent
Strongly Disagree	29	22.5
Disagree	31	24.0
Neutral	11	8.5
Agree	44	34.1
Strongly Agree	14	10.9
Total	129	100.0

Chart 4.6 - I help others who have been absent.

When asked about helping others who have been absent, about 1/3rd of respondents (34.1%) agree, showing that many are willing to extend support. Around 1/4th (24.0%) disagree, and slightly more than 1/5th (22.5%) strongly disagree, which highlights that a notable section does not actively engage in this behaviour. Only about 1/10th (10.9%) strongly agree, while 8.5% stay neutral. Overall, the responses reveal a mixed outlook—while a sizeable group is supportive, a considerable number also distance themselves from such responsibilities.

Table 4.7 - I willingly give my time to help others who have work-related problems

	Frequency	Percent
Strongly Disagree	22	17.1
Disagree	36	27.9
Neutral	17	13.2
Agree	25	19.4
Strongly Agree	29	22.5
Total	129	100.0

Chart 4.7 - I willingly give my time to help others who have work-related problems

The above table shows that 27.9% of respondents disagree and 17.1% strongly disagree with giving time to help others with work-related problems. About 19.4% agree, 22.5% strongly agree, and 13.2% remain neutral. This mixed response may be because some employees are willing to help only when workload allows, while others may feel their own tasks take priority. It reflects that while a portion of the workforce is supportive, practical constraints and personal priorities influence the overall willingness to assist colleagues.

Table 4.8 - I adjust my work schedule to accommodate other employees' requests for time off

	Frequency	Percent
Strongly Disagree	28	21.7
Disagree	25	19.4
Neutral	19	14.7
Agree	41	31.8
Strongly Agree	16	12.4
Total	129	100.0

Chart 4.8 - I adjust my work schedule to accommodate other employees' requests for time off

I adjust my work schedule to accommodate other employees' requests for time off.

The above table shows that 31.8% of respondents agree and 12.4% strongly agree that they adjust their work schedule to accommodate colleagues' requests for time off. On the other hand, 19.4% disagree and 21.7% strongly disagree, while 14.7% remain neutral. This suggests a mixed response, likely because some employees are flexible and cooperative, whereas others may find it difficult to adjust due to personal workload or rigid schedules. Overall, willingness to accommodate peers varies depending on individual priorities and work pressure.

Table 4.9 - I go out of my way to make newer employees feel welcome in the work group.

	Frequency	Percent
Strongly Disagree	21	16.3
Disagree	32	24.8
Neutral	11	8.5
Agree	37	28.7
Strongly Agree	28	21.7
Total	129	100.0

Chart 4.9 - I go out of my way to make newer employees feel welcome in the work group.

I go out of my way to make newer employees feel welcome in the work group.

I go out of my way to make newer employees feel welcome in the work group.

The above table shows that 28.7% of respondents agree and 21.7% strongly agree that they go out of their way to make new employees feel welcome. Meanwhile, 24.8% disagree and 16.3% strongly disagree, with 8.5% remaining neutral. This indicates a fairly balanced response, possibly because some employees are naturally welcoming and enjoy helping newcomers, while others may be less proactive due to workload, shyness, or lack of experience. Overall, the behaviour varies, reflecting differences in personal initiative and comfort with social interactions at work.

Table 4.10 - I show genuine concern and courtesy toward coworkers, even under the most trying business or personal situations.

	Frequency	Percent
Strongly Disagree	31	24.0
Disagree	26	20.2
Neutral	16	12.4
Agree	39	30.2
Strongly Agree	17	13.2
Total	129	100.0

Chart 4.10 - I show genuine concern and courtesy toward coworkers, even under the most trying business or personal situations.

I show genuine concern and courtesy toward coworkers, even under the most trying business or personal situations.

I show genuine concern and courtesy toward coworkers, even under the most trying business or personal situations.

The above table shows that 30.2% of respondents agree and 13.2% strongly agree that they show genuine concern and courtesy toward coworkers, even in challenging situations. On the other hand, 20.2% disagree and 24.0% strongly disagree, while 12.4% remain neutral. This mixed response may be because some employees naturally maintain professionalism and empathy, whereas others may struggle to stay considerate under stress or high workload. Overall, the data reflects that courteous and supportive behaviour varies depending on individual temperament and situational pressures.

Table 4.11 - I give up time to help others who have work or non-work problems.

	Frequency	Percent
Strongly Disagree	21	16.3
Disagree	36	27.9
Neutral	13	10.1
Agree	33	25.6
Strongly Agree	26	20.2
Total	129	100.0

Chart 4.11 - I give up time to help others who have work or non-work problems.

The above table shows that 25.6% of respondents agree and 20.2% strongly agree that they give up time to help others with work or non-work problems. Meanwhile, 27.9% disagree and 16.3% strongly disagree, and 10.1% remain neutral. This suggests a varied response, likely because some employees are willing to assist others despite their own tasks, while others may prioritize personal responsibilities or feel constrained by time. Overall, the willingness to dedicate time for colleagues' issues differs based on individual capacity and work priorities.

Table 4.12 - I share personal property with others to help their work.

	Frequency	Percent
Strongly Disagree	28	21.7
Disagree	28	21.7
Neutral	16	12.4
Agree	43	33.3
Strongly Agree	14	10.9
Total	129	100.0

Chart 4.12 - I share personal property with others to help their work.

The above table shows that 33.3% of respondents agree and 10.9% strongly agree that they share personal property to help others with their work. On the other hand, 21.7% disagree and another 21.7% strongly disagree, while 12.4% remain neutral. This indicates a mixed response, possibly because some employees are cooperative and willing to lend resources, whereas others may be cautious about sharing personal belongings. Overall, the tendency to share varies, reflecting differences in trust, comfort level, and personal boundaries among employees.

Table 4.13 - I attend functions that are not required but that help the organization's image.

	Frequency	Percent
Strongly Disagree	34	26.4
Disagree	36	27.9
Neutral	10	7.8
Agree	30	23.3
Strongly Agree	19	14.7
Total	129	100.0

Chart 4.13 - I attend functions that are not required but that help the organization's image

I attend functions that are not required but that help the organization's image.

The above table shows that 23.3% of respondents agree and 14.7% strongly agree that they attend optional functions to support the organization's image. Meanwhile, 27.9% disagree and 26.4% strongly disagree, with 7.8% remaining neutral. This indicates a varied response, likely because some employees see value in participating for organizational goodwill, while others may avoid extra functions due to personal commitments, workload, or lack of interest. Overall, participation in non-mandatory organizational events differs based on individual priorities and motivation.

Table 4.14 - I keep up with developments in the organization.

	Frequency	Percent
Strongly Disagree	23	17.8
Disagree	41	31.8
Neutral	13	10.1
Agree	27	20.9
Strongly Agree	25	19.4
Total	129	100.0

Chart 4.14 - I keep up with developments in the organization

The above table shows that 20.9% of respondents agree and 19.4% strongly agree that they keep up with developments in the organization. On the other hand, 31.8% disagree and 17.8% strongly disagree, while 10.1% remain neutral. This suggests a mixed response, possibly because some employees actively stay informed to perform better or contribute to decisions, whereas others may feel less engaged, too busy, or see limited personal benefit in tracking organizational updates. Overall, attentiveness to organizational developments varies across employees.

Table 4.15 - I defend the organization when other employees criticize it

	Frequency	Percent
Strongly Disagree	33	25.6
Disagree	33	25.6
Neutral	19	14.7
Agree	27	20.9
Strongly Agree	17	13.2
Total	129	100.0

Chart 4.15 - I defend the organization when other employees criticize it

The above table shows that 20.9% of respondents agree and 13.2% strongly agree that they defend the organization when others criticize it. Meanwhile, 25.6% disagree and another 25.6% strongly disagree, with 14.7% remaining neutral. This indicates a fairly divided response, likely because some employees feel loyalty and a sense of responsibility toward the organization, while others may avoid confrontation or feel less personally invested. Overall, the tendency to defend the organization varies depending on individual commitment and confidence in voicing support.

Table 4.16 - I show pride when representing the organization in public.

	Frequency	Percent
Strongly Disagree	23	17.8
Disagree	44	34.1
Neutral	14	10.9
Agree	27	20.9
Strongly Agree	21	16.3
Total	129	100.0

Chart 4.16 - I show pride when representing the organization in public.

The above table shows that 20.9% of respondents agree and 16.3% strongly agree that they show pride when representing the organization in public. In contrast, 34.1% disagree and 17.8% strongly disagree, while 10.9% remain neutral. This suggests a mixed response, possibly because some employees genuinely feel proud and motivated to represent the organization, whereas others may lack engagement, feel indifferent, or experience discomfort in public representation. Overall, the level of pride in representing the organization varies among employees.

Table 4.17 - I offer ideas to improve the functioning of the organization.

	Frequency	Percent
Strongly Disagree	38	29.5
Disagree	28	21.7
Neutral	12	9.3
Agree	32	24.8
Strongly Agree	19	14.7
Total	129	100.0

Chart 4.17 - I offer ideas to improve the functioning of the organization

The above table shows that 24.8% of respondents agree and 14.7% strongly agree that they offer ideas to improve the organization's functioning. Meanwhile, 21.7% disagree and 29.5% strongly disagree, with 9.3% remaining neutral. This indicates a varied response, likely because some employees actively contribute suggestions to enhance processes, while others may feel hesitant, lack confidence, or believe their input may not be valued. Overall, the willingness to propose improvements differs across employees based on motivation, confidence, and perception of organizational openness.

Table 4.18 - I express loyalty toward the organization

	Frequency	Percent
Strongly Disagree	24	18.6
Disagree	43	33.3
Neutral	15	11.6
Agree	23	17.8
Strongly Agree	24	18.6
Total	129	100.0

Chart 4.18 - I express loyalty toward the organization

The above table shows that 17.8% of respondents agree and 18.6% strongly agree that they express loyalty toward the organization. On the other hand, 33.3% disagree and 18.6% strongly disagree, while 11.6% remain neutral. This suggests a mixed response, likely because some employees feel a strong sense of loyalty and commitment, whereas others may feel disconnected, less engaged, or uncertain about the organization's direction. Overall, the expression of loyalty varies among employees based on personal experiences, engagement levels, and workplace satisfaction.

Table 4.19 - I take action to protect the organization from potential problems.

	Frequency	Percent
Strongly Disagree	31	24.0
Disagree	34	26.4
Neutral	16	12.4
Agree	30	23.3
Strongly Agree	18	14.0
Total	129	100.0

Chart 4.19 - I take action to protect the organization from potential problems.

The above table shows that 23.3% of respondents agree and 14.0% strongly agree that they take action to protect the organization from potential problems. Meanwhile, 26.4% disagree and 24.0% strongly disagree, with 12.4% remaining neutral. This indicates a fairly mixed response, likely because some employees proactively identify and address risks, while others may feel unsure, lack authority, or prefer to avoid responsibility for potential issues. Overall, the tendency to safeguard the organization varies based on individual initiative, confidence, and perception of responsibility.

Table 4.20 - I demonstrate concern about the image of the organization.

	Frequency	Percent
Strongly Disagree	21	16.3
Disagree	43	33.3
Neutral	15	11.6
Agree	25	19.4
Strongly Agree	25	19.4
Total	129	100.0

Table 4.20 - I demonstrate concern about the image of the organization

The above table shows that 19.4% of respondents agree and another 19.4% strongly agree that they demonstrate concern about the organization's image. Meanwhile, 33.3% disagree and 16.3% strongly disagree, with 11.6% remaining neutral. This suggests a mixed response, likely because some employees actively care about maintaining a positive image, while others may feel less responsible or less connected to the organization's reputation. Overall, concern for the organization's image varies among employees based on engagement, personal values, and perceived impact.

EMPLOYEE RECOGNITION

Table 4.21 - My personal wellbeing is important to my supervisor.

	Frequency	Percent
Strongly Disagree	30	23.3
Disagree	36	27.9
Neutral	19	14.7
Agree	34	26.4
Strongly Agree	10	7.8
Total	129	100.0

Chart 4.21 - My personal wellbeing is important to my supervisor

The above table shows that 26.4% of respondents agree and 7.8% strongly agree that their personal wellbeing is important to their supervisor. On the other hand, 27.9% disagree and 23.3% strongly disagree, while 14.7% remain neutral. This indicates a mixed response, likely because some supervisors show genuine concern for employees' wellbeing, while others may prioritize tasks and targets over personal care. Overall, perceptions of supervisory support for personal wellbeing vary depending on individual experiences and the nature of supervisor-employee interactions.

Table 4.22 - My supervisor makes me feel that I matter.

	Frequency	Percent
Strongly Disagree	19	14.7
Disagree	49	38.0
Neutral	10	7.8
Agree	28	21.7
Strongly Agree	23	17.8
Total	129	100.0

Chart 4.22 - My supervisor makes me feel that I matter

The above table shows that 21.7% of respondents agree and 17.8% strongly agree that their supervisor makes them feel that they matter. Meanwhile, 38.0% disagree and 14.7% strongly disagree, with 7.8% remaining neutral. This suggests a mixed response, likely because some supervisors actively recognize and value their employees, while others may be less attentive or focused on performance metrics rather than personal acknowledgment. Overall, the sense of being valued by supervisors varies among employees based on leadership style and interpersonal engagement.

Table 4.23 - My supervisor is sensitive to my needs.

	Frequency	Percent
Strongly Disagree	28	21.7
Disagree	35	27.1
Neutral	21	16.3
Agree	30	23.3
Strongly Agree	15	11.6
Total	129	100.0

Chart 4.23 - My supervisor is sensitive to my needs

The above table shows that 23.3% of respondents agree and 11.6% strongly agree that their supervisor is sensitive to their needs. On the other hand, 27.1% disagree and 21.7% strongly disagree, while 16.3% remain neutral. This indicates a mixed response, likely because some supervisors demonstrate understanding and attentiveness, whereas others may be less responsive or focused on organizational targets. Overall, perceived sensitivity of supervisors varies depending on individual experiences and the level of attention supervisors give to employees' needs

Table 4.24 - I receive congratulations from my supervisor when I reach specific goals.

	Frequency	Percent
Strongly Disagree	17	13.2
Disagree	48	37.2
Neutral	9	7.0
Agree	27	20.9
Strongly Agree	28	21.7
Total	129	100.0

Chart 4.24 - I receive congratulations from my supervisor when I reach specific goals.

The above table shows that 20.9% of respondents agree and 21.7% strongly agree that they receive congratulations from their supervisor upon reaching specific goals. Meanwhile, 37.2% disagree and 13.2% strongly disagree, with 7.0% remaining neutral. This mixed response may be because some supervisors actively recognize achievements, while others may overlook acknowledgment or provide minimal feedback. Overall, employees' experiences of receiving recognition for goal achievement vary depending on supervisory style and the emphasis placed on appreciation within the workplace

Table 4.25 - My supervisor thanks me when I successfully reach performance goals or other targets.

	Frequency	Percent
Strongly Disagree	31	24.0
Disagree	34	26.4
Neutral	17	13.2
Agree	30	23.3
Strongly Agree	17	13.2
Total	129	100.0

Chart 4.25 - My supervisor thanks me when I successfully reach performance goals or other targets

My supervisor thanks me when I successfully reach performance goals or other targets.

The above table shows that 23.3% of respondents agree and 13.2% strongly agree that their supervisor thanks them when they successfully reach performance goals or targets. Meanwhile, 26.4% disagree and 24.0% strongly disagree, with 13.2% remaining neutral. This suggests a mixed response, likely because some supervisors actively express appreciation for achievements, while others may focus more on results than recognition. Overall, the frequency of receiving thanks from supervisors varies depending on individual leadership styles and organizational culture.

Table 4.26 - My supervisor recognize(s) the quality of the work that I do.

	Frequency	Percent
Strongly Disagree	22	17.1
Disagree	43	33.3
Neutral	10	7.8
Agree	28	21.7
Strongly Agree	26	20.2
Total	129	100.0

Chart 4.26 - My supervisor recognize(s) the quality of the work that I do

The above table shows that 21.7% of respondents agree and 20.2% strongly agree that their supervisor recognizes the quality of their work. Meanwhile, 33.3% disagree and 17.1% strongly disagree, with 7.8% remaining neutral. This mixed response may be because some supervisors actively acknowledge good work, while others may overlook recognition or focus more on outcomes than effort. Overall, employees' perception of being recognized for work quality varies depending on supervisory attention and the culture of appreciation within the organization.

Table 4.27 - My supervisor comments on the level of professionalism I exhibit through my work.

	Frequency	Percent
Strongly Disagree	26	20.2
Disagree	33	25.6
Neutral	16	12.4
Agree	34	26.4
Strongly Agree	20	15.5
Total	129	100.0

Chart 4.27 - My supervisor comments on the level of professionalism I exhibit through my work.

My supervisor comments on the level of professionalism I exhibit through my work.

The above table shows that 26.4% of respondents agree and 15.5% strongly agree that their supervisor comments on the level of professionalism they exhibit. Meanwhile, 25.6% disagree and 20.2% strongly disagree, with 12.4% remaining neutral. This indicates a fairly mixed response, likely because some supervisors actively provide feedback on professionalism, while others may focus more on results than conduct. Overall, the degree of supervisory feedback on professional behaviour varies depending on leadership style and individual employee interactions.

Table 4.28 - My hard-work and dedication are noticed by my supervisor.

	Frequency	Percent
Strongly Disagree	17	13.2
Disagree	47	36.4
Neutral	12	9.3
Agree	24	18.6
Strongly Agree	29	22.5
Total	129	100.0

Chart 4.28 - My hard-work and dedication are noticed by my supervisor

The above table shows that 18.6% of respondents agree and 22.5% strongly agree that their hard work and dedication are noticed by their supervisor. Meanwhile, 36.4% disagree and 13.2% strongly disagree, with 9.3% remaining neutral. This suggests a mixed response, likely because some supervisors actively recognize employee effort, while others may focus more on outcomes rather than acknowledging dedication. Overall, the perception of being noticed for hard work varies among employees depending on supervisory attentiveness and organizational recognition practices.

INFERENTIAL ANALYSIS

Objective 1: To examine the relationship between employee recognition programs and extra-role behaviour in the hospitality sector.

- **H₀₁:** Employee recognition program does not relate with extra role behaviour.
- **H₁₁:** Employee recognition program relate with extra role behaviour.

Correlations (Pearson)

		OCB	ER
OCB	Pearson Correlation	1	.837**
	Sig. (2-tailed)		.000
	N	129	129
ER	Pearson Correlation	.837**	1
	Sig. (2-tailed)	.000	
	N	129	129

A **Pearson correlation** was conducted to examine the relationship between **employee recognition programs (ER)** and **extra-role behaviour (OCB)** in the hospitality sector. The results indicate a **strong positive correlation** between employee recognition and extra-role behaviour, $r = .837$, $n = 129$, $p < .001$. Since the p-value is less than 0.05, the result is statistically significant. This implies that higher levels of employee recognition are associated with higher levels of extra-role behaviour. Therefore, the null hypothesis (H₀₁), which states that there is no significant relationship between employee recognition programs and extra-role behaviour, is **rejected**, and the alternative hypothesis (H₁₁) is **accepted**. Hence when employee is recognised, he/she exhibits extra role behaviour in the organisation.

Model Summary of Linear Regression

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.837 ^a	.701	.698	.67993

A simple linear regression was conducted to test whether employee recognition programs (ER) significantly predict extra-role behaviour (OCB) in the hospitality sector. The model summary shows a correlation coefficient of $R = .837$, indicating a strong positive relationship between ER and OCB. The $R^2 = .701$ reveals that 70.1% of the variance in extra-role behaviour can be explained by employee recognition programs. The Adjusted $R^2 = .698$ confirms that the model is a good fit, even after adjusting for sample size. The Standard Error of the Estimate = .67993, which is relatively low, indicates that the regression model predicts OCB scores with reasonable accuracy.

Objective 2: To evaluate whether recognition programs exert varying impacts across different functional areas of the hospitality industry.

- **H₀₂:** Recognition programs do not have significantly different impacts across various functional areas of the hospitality industry.
- **H₁₂:** Recognition programs have significantly different impacts across various functional areas of the hospitality industry.

ONE WAY ANOVA

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	72.473	8	9.059	7.709	.000
Within Groups	141.009	120	1.175		
Total	213.481	128			

A one-way ANOVA revealed that the impact of recognition programs differed significantly across functional areas of the hospitality industry, $F(8, 120) = 7.71, p < .001$. This result suggests that functional area plays an important role in shaping how recognition programs are perceived and experienced.

Since the p-value is less than 0.05, the null hypothesis (H₀₂) is rejected. The alternative hypothesis (H₁₂) is accepted, meaning recognition programs do exert significantly different impacts across functional areas of the hospitality industry.

Objective 3: To analyze the significance of demographic variables, such as gender, in the relationship with employee recognition.

- **H₀₃:** Gender does not significantly differ the relationship with employee recognition.
- **H₁₃:** Gender significantly differ the relationship with employee recognition.

Group Statistics

	Gender	N	Mean	Std. Deviation	Std. Error Mean
ER	Male	104	2.8438	1.30356	.12782
	Female	25	2.9800	1.25969	.25194

Independent Samples Test

		Levene's Test for Equality of Variances		t-test for Equality of Means						
		F	Sig.	t	Df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference	
									Lower	Upper
ER	Equal variances assumed	.857	.356	-.472	127	.638	-.13625	.28854	-.70722	.43472
	Equal variances not assumed			-.482	37.369	.632	-.13625	.28251	-.70848	.43598

An independent samples t-test revealed no significant difference in the impact of recognition programs on extra-role behaviour between male ($M = 2.84$, $SD = 1.30$) and female employees ($M = 2.98$, $SD = 1.26$), $t(127) = -0.47$, $p = .64$. Thus, gender does not appear to play a significant role in moderating the relationship between recognition and extra-role behaviour.

Since $p > 0.05$, the null hypothesis (H_{03}) is accepted. This means gender does not significantly impact the relationship between employee recognition and extra-role behaviour.

Objective 4: To analyze the significance of demographic variables, such as gender, in the relationship with extra role behaviour.

- **H₀₄:** Gender does not significantly differ the relationship with extra role behaviour.
- **H₁₄:** Gender significantly differ the relationship with extra role behaviour.

	Gender	N	Mean	Std. Deviation	Std. Error Mean
OCB	Male	104	2.9090	1.26778	.12432
	Female	25	2.7840	1.12353	.22471

		Levene's Test for Equality of Variances		t-test for Equality of Means						
		F	Sig.	t	df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	95% Confidence Interval of the Difference	
									Lower	Upper
OCB	Equal variances assumed	3.065	.082	.452	127	.652	.12497	.27661	-.42238	.67233
	Equal variances not assumed			.487	40.065	.629	.12497	.25680	-.39402	.64396

An independent samples t-test revealed no significant difference in extra role behaviour between male ($M = 2.91$, $SD = 1.27$) and female employees ($M = 2.78$, $SD = 1.12$), $t(127) = 0.45$, $p = .65$. Thus, gender does not appear to play a significant role in influencing extra role behaviour.

CHAPTER V

CONCLUSION

FINDINGS

1. The study shows that when employees feel recognized, they are much more likely to go beyond their usual responsibilities. Recognition and extra-role behaviour share a very strong positive link.
2. This link is not just by chance—it is statistically significant. In simple terms, appreciation at work really does encourage employees to contribute more.
3. Recognition explains over 70% of the difference in employees' willingness to engage in extra-role activities, which is quite a large share.
4. The effect of recognition is not uniform across the hospitality sector. Some departments respond more strongly to recognition programs than others.
5. This suggests that what works for the front desk may not work the same way for housekeeping or the kitchen. Each functional area has its own culture and expectations that shape how recognition is received.
6. On the other hand, when it comes to gender, recognition impacts men and women in very similar ways. Both groups show almost identical levels of extra-role behaviour when appreciated.
7. Since there was no meaningful statistical difference between male and female employees, gender does not act as a barrier or booster in the recognition–behaviour relationship.

SUGGESTIONS AND RECOMMENDATIONS

1. Establish a consistent and visible recognition culture across the organization to actively encourage extra-role behaviours. Recognition should not be viewed as a one-time reward but as an ongoing part of employee engagement and motivation strategies.
2. Position employee recognition as a strategic HR and management priority. Ensure leadership and team managers understand the measurable impact of recognition and are held accountable for recognizing team contributions.
3. Invest in formalized recognition systems, such as structured employee appreciation programs, digital recognition platforms, or monthly "above and beyond" awards. Given its substantial influence, recognition should be budgeted and tracked like other high-impact organizational practices.
4. Adopt a department-specific approach to recognition. Conduct department-level feedback or focus groups to tailor recognition efforts to what resonates best within each team
5. Customize recognition methods to align with the values, working styles, and visibility of each department. For example, front desk may require public recognition, customer commendation sharing. Kitchen may require Team-based rewards or chef shout-outs during briefings. Housekeeping may require Quiet, consistent acknowledgments or supervisor praise.
6. Design recognition programs to be inclusive and gender-neutral, ensuring fairness and transparency across the board. Since impact is consistent across genders, focus on *what* is appreciated rather than *who* is appreciated.
7. Avoid unnecessary segmentation by gender in recognition practices. Instead, focus efforts on performance, contribution, and department-specific preferences. Recognition initiatives should emphasize merit, effort, and behavior, rather than demographic characteristics.

CONCLUSION

The study highlights the critical role of employee recognition in shaping extra-role behaviour within the hospitality sector. Findings revealed a strong and significant link, showing that recognition not only motivates employees but also encourages them to contribute beyond their formal responsibilities. Recognition emerged as a powerful predictor of extra-role behaviour, explaining a large proportion of its variation. However, its impact is not uniform across departments, suggesting the need for tailored approaches to suit different functional areas. At the same time, gender was found to have no significant influence, confirming that recognition benefits employees equally, irrespective of gender. Overall, the results emphasize that recognition is not just a symbolic gesture but a strategic tool for building a more engaged, committed, and high-performing workforce in the hospitality industry.
