

Voice & Tone Questionnaire — for Sreetama

Consent / scope. Only Sreetama should answer this. The resulting style profile is for her own writing only (this thesis, and any of her own future drafts) — not for imitating anyone else or for any use beyond her own work.

Purpose. Every thesis chapter so far has gone through heavy AI drafting/editing, so none of it is a reliable sample of your own natural writing voice. These questions exist to collect that sample — answers here become the basis for a "write like Sreetama" style profile used to keep the thesis (and other writing) sounding like you instead of like an AI.

How to answer — read this first:

- Type your own first-draft answer. No AI, no grammar-checker, no polishing pass. Typos and rough sentences are fine and useful — they show real patterns.
 - Answer as fully as feels natural — don't cap yourself at a couple of sentences. Total across everything, aim for roughly 800–1,200 words; some questions will pull more out of you than others, that's fine.
 - For the casual questions (Part 1–3): answer in whatever mix of English/Hinglish/Bengali-English you'd normally use if no one was going to grade it.
 - For the paraphrase task and the formal-assignment prompt (Part 5 and Q11): write in the plain, careful English you'd actually want in your thesis — no code-switching there, since those two answers teach the profile what your formal register looks like.
 - There are no wrong answers — the goal is to see how *you* naturally explain, argue, and transition between ideas, plus your actual vocabulary and English comfort level.
 - **Questions 1–8 and the paraphrase task (Part 5) matter most** — they're the real evidence. Questions 9–10 are useful context but shouldn't outweigh what your actual writing shows.
-

Part 1 — Explaining things, different audiences

1. Explain your research topic to a friend who has never heard of "hybrid learning" or HR — like you're texting them, not writing a report.
2. Now explain the same topic to your guide/HOD in a quick hallway conversation — a bit more careful, but still spoken, not written-for-submission.
3. A junior student in your program asks: "how do I pick a good thesis topic?" What do you actually tell them?

Part 2 — Personal / motivation

4. Why did you pick this specific topic (hybrid learning at Union Bank) instead of something else? What made it interesting to you personally?
5. What was the most annoying or difficult part of doing this research so far (data collection, questionnaire, literature review, anything)? Describe what actually happened.

6. What do you hope someone reading your finished thesis takes away from it?

Part 3 — Opinions / debate

7. Do you personally think hybrid learning actually works better than fully classroom or fully digital training? Why or why not — your honest take, not the "objective" academic answer.

8. Someone argues that digital-only training is cheaper so companies should just drop classroom training entirely. How would you respond to them?

Part 4 — Same idea, two formalities (shows how you shift register)

9. Pick one idea from your research (any of the constructs — Hybrid Learning, Trainer Competence, Learner Engagement, Training Effectiveness — or the overall point of your study). Write it two ways:
- **First**, as a WhatsApp message to a friend.
 - **Then**, as an assignment answer — same idea, formal version.

Part 5 — Formal register sample (write this one in careful, thesis-appropriate English)

10. Write a short 120–180 word answer, as if for an assignment: *"Why is employee training important in banks today?"*

Part 6 — Paraphrase comparison (also write this one in thesis-appropriate English — most useful task, please do it properly)

Below is a paragraph from the current AI-drafted Chapter 1. **Without treating it as a "correct" version to copy** — read it once, then close it and rewrite the same idea in your own words, your own sentence lengths, like you were explaining it in an assignment answer. Don't aim to match its length or structure.

Employee training is central to the work of a bank. Employees must keep pace with changes in digital systems, products, internal processes, customer service practices, risk controls, and regulatory requirements. A training programme is useful only when employees can access the material, understand it, participate in the learning process, and use the learning in relevant work situations. This makes the design and delivery of training an important human-resource issue, rather than a matter of attendance alone.

Your version:

(write here)

Part 7 — Self-awareness about your own writing (context only, lowest weight)

11. What words or phrases do you notice yourself using a lot, in speech or writing? (e.g. "basically", "at the end of the day", "so yeah", anything)
12. When you write something formal in English, what's genuinely hard or uncomfortable about it? (word choice, grammar, knowing how formal to be, something else)

Once answered: send this file back (or paste answers here) and Claude will build the actual style-matching skill from it — extracting sentence length, favorite words/transitions, hedging style, formality range, and how you naturally sequence an explanation.

Non-negotiables for the rewrite skill built from this:

- May adjust wording, flow, sentence rhythm, and formality level to match Sreetama's voice.
- Must preserve, unchanged: facts, citations, statistical results, quotations, and academic meaning.
- Must never silently invent or alter a substantive claim to make a sentence sound more natural. If matching her voice would require changing what a sentence actually claims, the skill flags that passage for her to decide instead of rewriting it silently.
